Physics in Reduced Dimensions: Nanoscience for Mega-Impact

“There is plenty of room at the bottom,” Richard Feynman told a group of physicists in 1959, in a famous call for new investigations into subatomic science. The many new wonders of nanoscience demonstrate the prescience of Feynman’s claim. Over the last few decades, the effort to turn molecular and atomic building blocks into functional materials has energized scientists and engineers, and eventually led to the field of nanotechnology.

With the emergence of nanotechnology, scientific scrutiny must now shift again, tracing these nano-level discoveries back up to a larger scale, where materials with predictive functionality can be assembled atom by atom. Manipulations at the sub-nanometer scale are extremely promising, making it possible to express the intricacies of quantum physics at the device level. These manipulations are also extremely challenging, requiring technical mastery at many different levels.

In this talk, Rensselaer professor Vincent Meunier will present examples from the quest to optimize properties at the nanoscale for macroscopic applications in areas such as energy harvesting, storage, water purification, and nanomaterials design. The use of large-scale supercomputing will be highlighted, showing how current capabilities are quickly closing the gap between realistic length and time scales with those amenable to state-of-the-art modeling.

## **Biography**

Vincent Meunier

Vincent Meunier is an associate professor in the Department of Physics, Applied Physics and Astronomy and in the Materials Science and Engineering departments at Rensselaer Polytechnic Institute, where he is the Gail and Jeffrey L. Kodosky ’70 Constellation Chair. Meunier earned his PhD from the University of Namur in Belgium in 1999 and was a senior research and development staff member at Oak Ridge National Laboratory until 2010, when he joined Rensselaer. He has published more than 150 papers in peer-reviewed journals and is a fellow of the American Physical Society. Meunier leads the Innovative Computational Material Physics (ICMP) group, where his research uses computation to examine the atom-level details of materials. He is particularly interested in low-dimensional materials and domains where he can collaboratively work with engineers and experimentalists to optimize these materials, starting at the atomic level and targeting higher-level functionality.

# STAFF

Johannes Goebel / Director  
Geoff Abbas / Director for Stage Technologies  
Eric Ameres / Senior Research Engineer  
S. Argeo Ascani / Curator, Music  
David Bebb / Senior System Administrator  
Peter Bellamy / Senior Systems Programmer  
Michael Bello / Video Engineer  
Victoria Brooks / Curator, Time-Based Visual Arts  
Eric Brucker / Lead Video Engineer  
Ash Bulayev / Curator, Dance + Theater  
Michele Cassaro / Guest Services Coordinator  
John Cook / Box Office Manager  
Roxanne DeHamel / Web Developer  
David DeLaRosa / Production Technician  
Zhenelle Falk / Artist Services Administrator  
William Fritz / Master Carpenter  
Kimberly Gardner / Manager, Administrative Operations  
Ian Hamelin / Project Manager  
Katie Hammon / Administrative Specialist  
Ryan Jenkins / Event Technician  
Shannon Johnson / Design Director  
Pamela Keenan / Production Technician  
CathyJo Kile / Business Manager  
Eileen Krywinski / Graphic Designer  
Carl Lewandowski / Production Technician  
Eric Chi-Yeh Lin / Lead Stage Technician  
Stephen McLaughlin / Event Technician  
Josh Potter / Marketing and Communications Manager  
Alena Samoray / Production Technician  
Candice Sherman / Business Coordinator  
Avery Stempel / Front of House Manager  
Kim Strosahl / Acting Production Administrative Coordinator  
Jeffrey Svatek / Audio Engineer  
Dan Swalec / Master Electrician  
Todd Vos / Lead Audio Engineer  
Pete Wargo / Manager, Information Systems  
Michael Wells / Production Technician  
Emily Zimmerman / Associate Curator

*EMPAC 2014-2015 presentations, residencies, and commissions are supported by grants from the National Endowment for the Arts and The MAP Fund, a program of Creative Capital, primarily supported by the Doris Duke Charitable Foundation; additional funding from the Andrew W. Mellon Foundation, the Community Connections Fund of the MetLife Foundation, Boeing Company Charitable Trust, and the New York State Council for the Arts. Special thanks to the Jaffe Fund for Experimental Media and Performing Arts for support of artist commissions.*
